

How To Pull Lists In VFL

Virtual Flip Leads

This SOP shows you how to pull a clean list of tear down properties in Virtual Flip Leads, once you already know your market. If you have not found your market yet, use the *Finding Goldmine Markets for Luxury Wholesaling* SOP first. That guide walks you through Zillow to find your numbers. This guide picks up once you have those numbers and shows you the exact steps inside VFL.

Before You Start

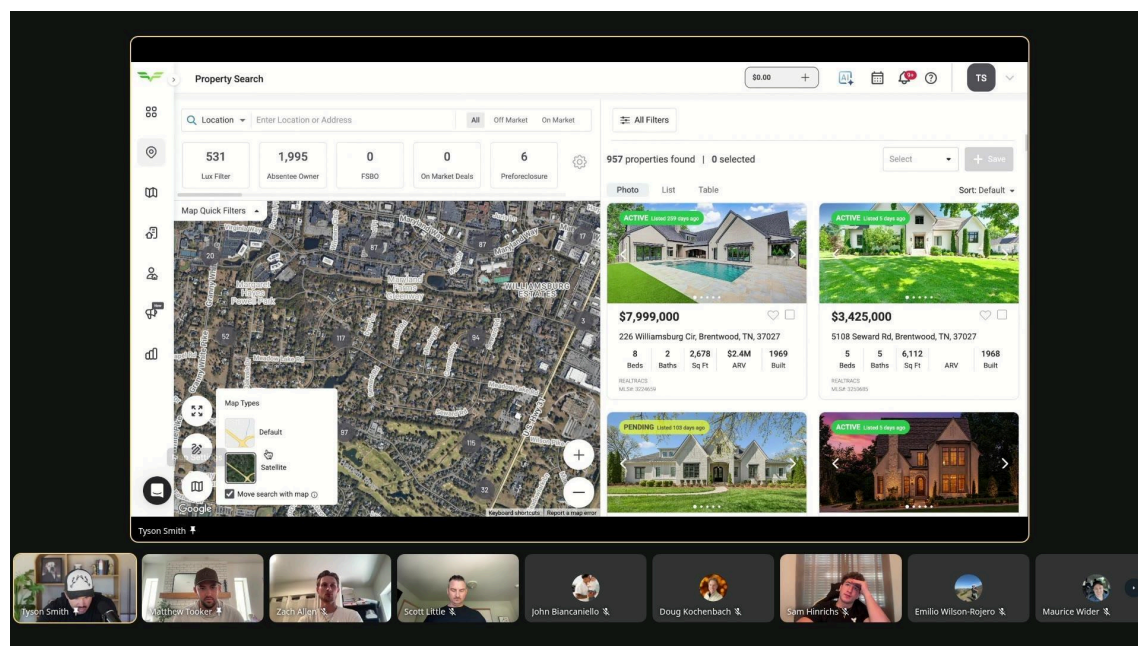

You will need three numbers before you open VFL. You get both from your market research on Zillow.

- Your minimum lot size. This is the smallest lot size you saw on the new builds in your market.
- Your max year built. This is the newest year you found among the older tear down homes, plus a small buffer of a few years.

You also need to know exactly where your neighborhood starts and stops on the map, so leave out anything across a main road or highway, and leave out any separate subdivision or gated community sitting right next to it.

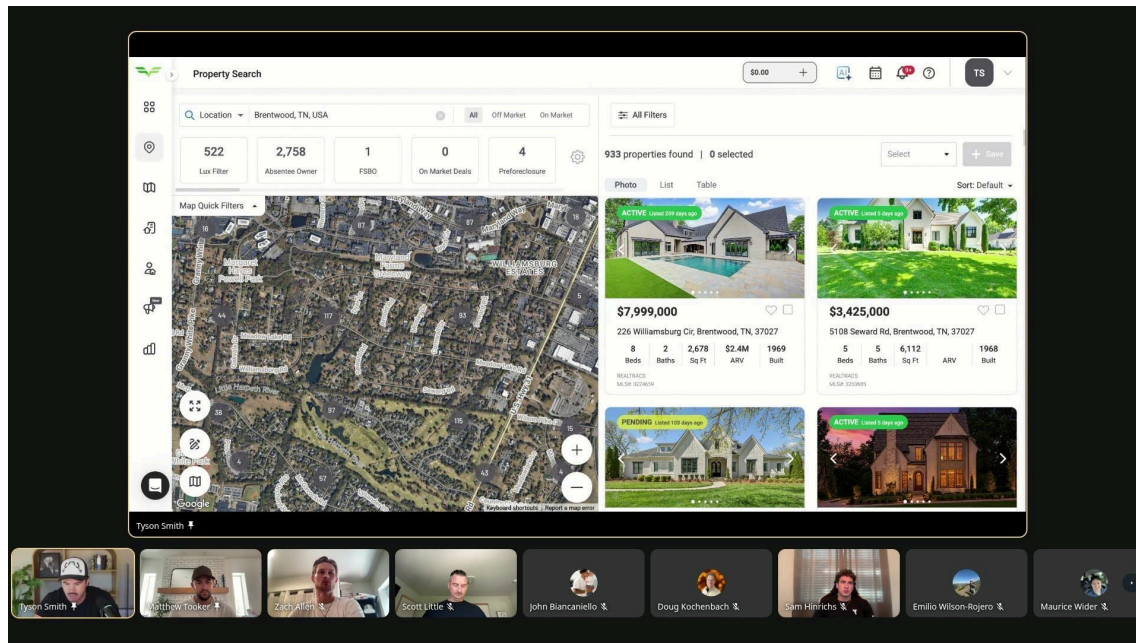

How To Pull The List

1. **Switch VFL to satellite view.** This lets you see the same neighborhood you just researched on Zillow. Click the map icon in the bottom left corner and choose Satellite.

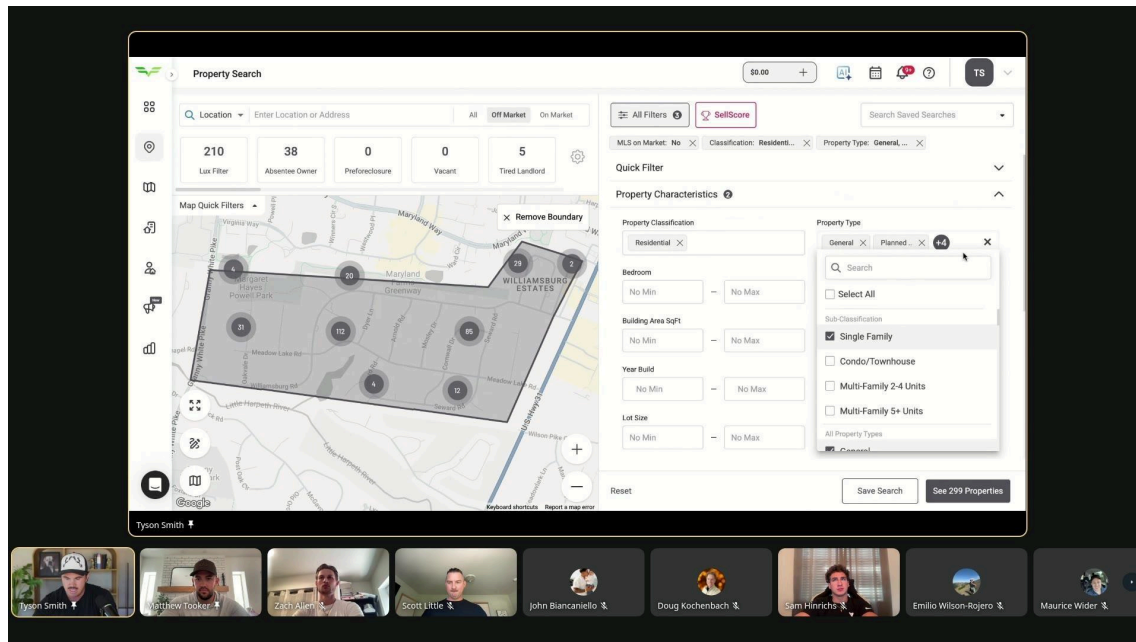

Click the map icon in the bottom left corner, then choose Satellite instead of Default.

2. **Zoom in before you draw.** Zoom in on the exact neighborhood first. This makes your boundary line accurate.

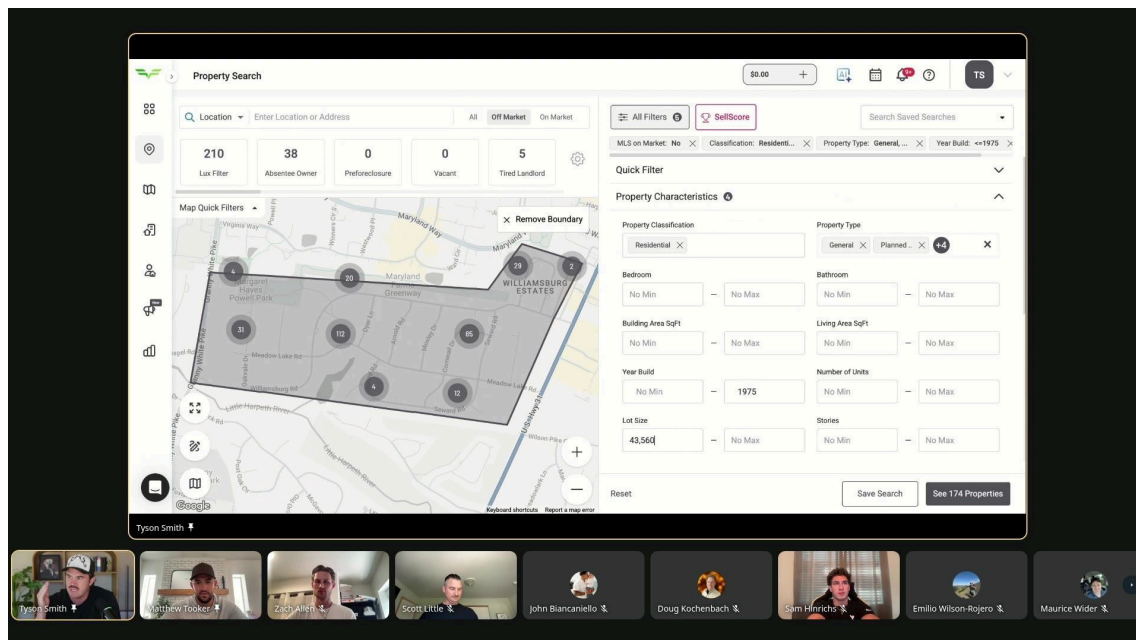

Zoomed in on the neighborhood in satellite view, before drawing the boundary.

3. **Draw your boundary.** Click Boundary Search, then click the triangle tool. Draw around the exact neighborhood only. Leave out anything on the main road or highway. Leave out any separate community sitting next to it, like a golf course or gated neighborhood.
4. **Filter for off market only.** This is the most important filter on the list. Only pull off market properties. Never pull anything listed for sale, and never pull for sale by owner properties. If a property is already listed, anyone can see it, so you bring no value to a developer by handing them that deal. The good deals live off market. That is where you make your money as a wholesaler.
5. **Set your property characteristics.** Go to Property Characteristics. Set Residential. Set Property Type to Single Family.

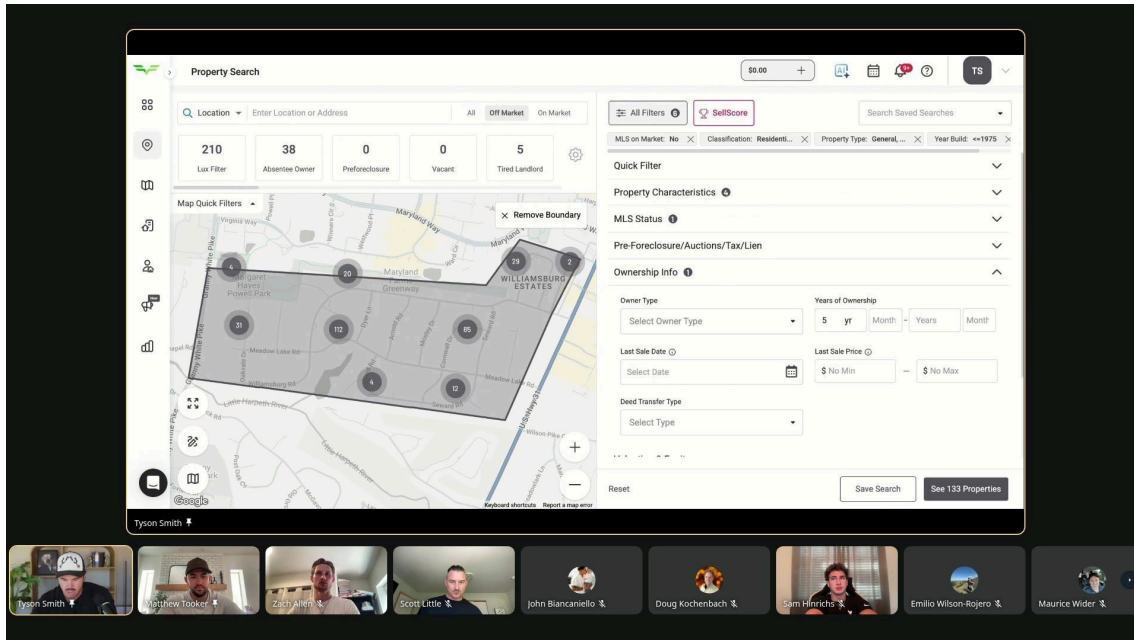

The boundary drawn around the exact neighborhood, with Off Market turned on and Single Family selected under Property Type.

6. **Set your year built.** Enter the max year built you found during your research.
7. **Set your lot size.** Enter your minimum lot size. One acre equals 43,560 square feet. You can leave the maximum blank.

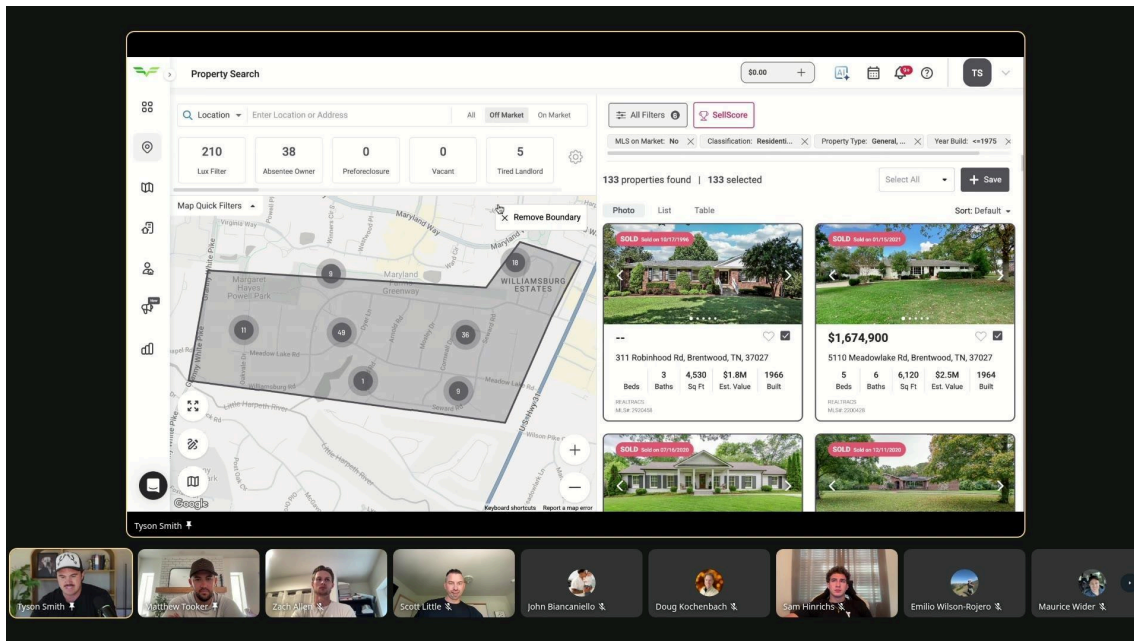

Year Built set to 1975 and Lot Size set to 43,560 square feet, which is 1 acre.

8. **Set your ownership length.** Go to Ownership Info. Set a minimum of 5 years of ownership.

The Ownership Info section, with Years of Ownership set to 5.

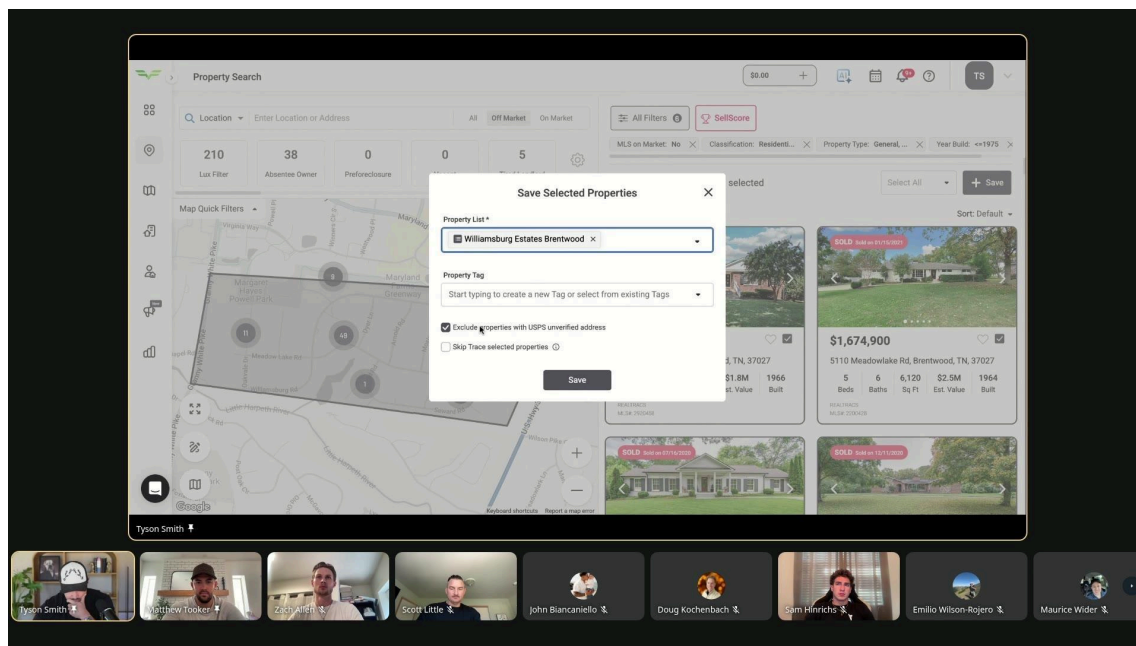

9. **Check your count.** Look at how many properties are left after your filters. This is your list.

133 properties found after all the filters were applied.

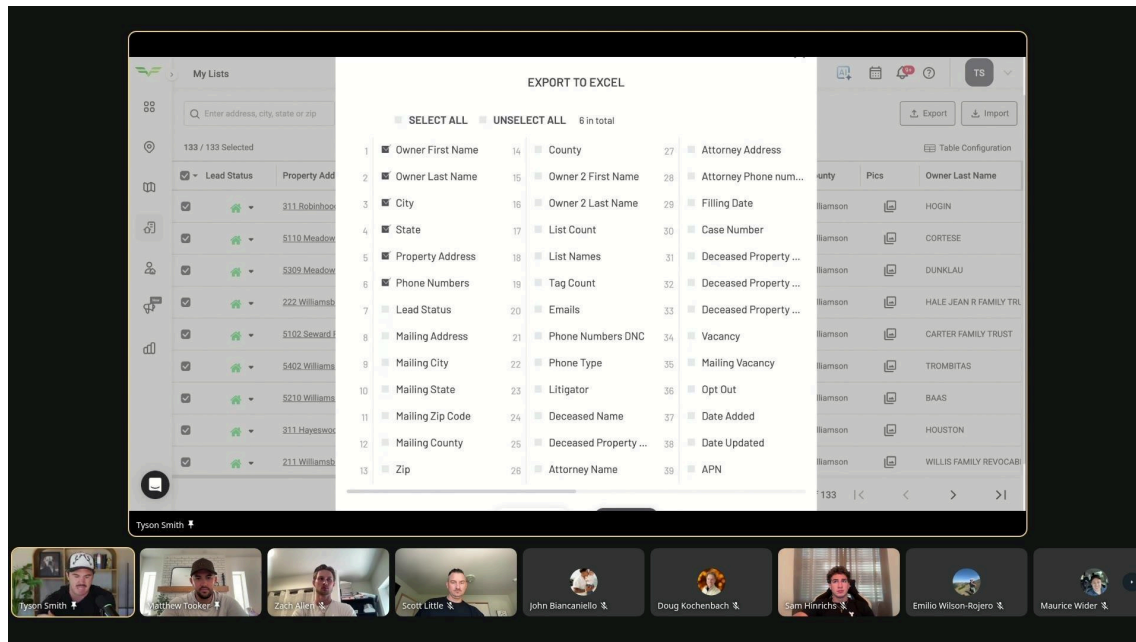

10. **Save your list.** Select all the properties and save them. Name the list after the actual neighborhood, not just the city. To find the real neighborhood name, click into one of the listings and look for the subdivision name in the description. If you cannot find it there, ask in the team chat, or ask an AI tool what the neighborhood is called.

11. **Skip trace the list.** Skip the USPS unverified address step. Only turn that on if you are working in a very remote luxury market, like Montana or Wyoming. Skip the agent saving step too, you will not need it. Click Skip Trace, then Next.

Naming the list Williamsburg Estates Brentwood, with Exclude USPS unverified addresses checked and Skip Trace left off.

12. **Export your list.** Once the list finishes processing, go to My Lists and open your list. Select all the contacts. Go to Actions, then Export Excel.
13. **Choose your export fields.** At minimum, export the owner first name, last name, city, state, address, and phone numbers. Add zip code if you plan to use it inside your text messages. Only add mailing address, mailing city, mailing state, and mailing zip if you are running a mail campaign.

The Export To Excel screen. Owner First Name, Owner Last Name, City, State, Property Address, and Phone Numbers are checked.

14. Name your file and export. Enter a file name and export.

15. Download your file. Your export shows up under Reports, then Save slash Export. Click download.

16. Prep the file for Smarter Contact. Open the file in Excel, Google Sheets, or Numbers. Save it as a CSV. Now you can upload it into Smarter Contact.

A few more things to know

- Re-pull this same list every 3 to 4 weeks. New properties may qualify once they cross the 5 year ownership mark, and you will want to send a new campaign to the list.
- This same process works in other tools too, like PropStream, Land Atlas, X Leads, Deal Machine, or Deal Sauce. The filters stay the same. Only the screen looks different.

Quick Recap

Every time you pull a list, you are always doing these five things:

- Drawing a boundary around the exact neighborhood, never a whole city
- Filtering for off market only
- Filtering for single family residential
- Filtering for your year built cutoff
- Filtering for at least 5 years of ownership
